Title: Designing a Windows Form App using DateTime Picker Controller

Aims:

- To design and develop Windows Forms applications using DateTimePicker and other standard controls to select dates, calculate age, display user input, upload images, and present processed information through labels and message boxes in an interactive user interface.

Exercise 01: (Project name: DateTimePicker)

Design a WF App as shown in the figure given below to using a DateTimePicker, Button and a label controller to display the selected date when the user clicks on the Select Date button.

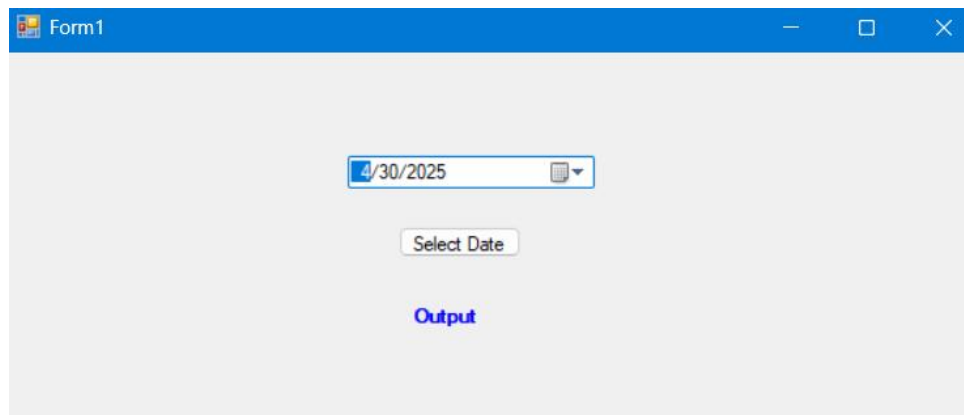

Figure 1: UI Design

Exercise 02: (Project name: AgeCalculator)

Design an age calculator app as given in the image below:

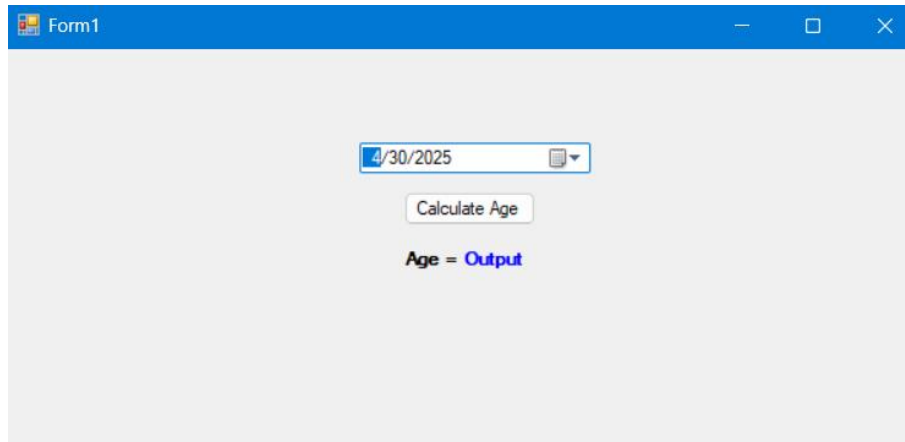

Figure 1: Age Calculator App

Exercise 03: (Project name: FormApplication)

Design an application calculates the age of a person for the date selected from the dateTimePicker tool and display it onto the Message Box. And also, allow the user to click on the PictureBox to upload and display a picture from their computer.

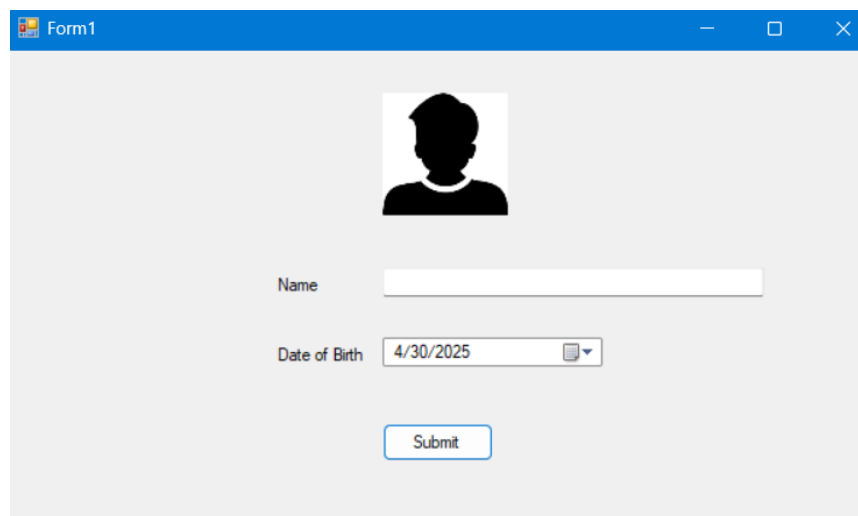

Figure 3: Form UI

All the details should be displayed onto a message box as shown below when the user clicks on the SUBMIT button. The message should be an information and with okCancel button. Message title is Submitted Details.

Name is <*Display the name entered*>

Date of Birth is <*Display the date of birth given*>

Age is <*Display the age*>
